BABOR TECH

High-tech skin analysis

Computer-aided skin analysis using the BABOR Derma Visualizer. This high-resolution camera with 80x zoom measures the number and depth of wrinkles, reveals the skin's fat content, visualises the activity of sebaceous glands and analyses pore size. It also documents the number, size and changes of skin anomalies and measures skin hydration. Get to know your skin in detail with our analysis camera and discover how you can become even more beautiful – after all, you can only give your skin the care and protection it needs if you know it inside out.

If you buy any skincare products after your treatment, the cost of the skin analysis will be deducted.

Microneedling

A gentle, non-invasive anti-ageing treatment to naturally rejuvenate the skin. Small pricks are made on the surface of the skin to make it more permeable for our highly effective active ingredients and to ensure that the selected active ingredients penetrate the precise areas of skin where they will do the most good. This treatment also stimulates the skin's functions, boosts circulation and triggers the skin's natural regeneration process.

Face, neck and décolletage
75 min. | from EUR 160.00

Ultrasound

The frictional energy generated by high-frequency sound waves is converted into heat in the skin. This has a stimulating effect that triggers biochemical processes. At the same time, the vibrations gently massage the skin tissue.

A pleasant, deeply effective and highly efficient micro-massage with instant results. For an improved skin structure and a clearer, smoother and noticeably younger complexion – that really lasts.

Available as an add-on to a facial treatment.
